

RomoGIS Services and Offerings

- 1. GIS and Social Justice Workshops:** RomoGIS offers workshops that focus on the use of GIS for social justice and equity. These workshops cover topics such as mapping of social vulnerabilities, environmental hazards, and other socio-economic factors that contribute to social inequities. Our team's experience in community advocacy helps us navigate our clients' needs and build customized workshops that support, interest and empower all stakeholders.
- 2. GIS for Equity Consulting Services:** RomoGIS provides consulting services to organizations seeking to leverage the power of their technology to strengthen their ability to enact social change. We provide organizations strategic and technical support to build tools that positively impact their communities. Our full-stack technical services include strategic planning, data infrastructure, GIS analysis, and custom web application development. Using these tools we help clients develop innovative solutions to address the social priorities for the organizations we serve.
- 3. GIS Training and Capacity Building:** RomoGIS provides training and capacity building services to organizations that want to build their GIS capabilities in-house. We offer training on GIS software, data collection and analysis, and spatial analysis techniques. We also provide project management and technical support to organizations/teams as they build their own GIS teams and capabilities. These efforts are intentionally implemented to support the sustainability of the solutions developed for the organizations that we work with.
- 4. GIS Data Analysis and Mapping Services:** RomoGIS offers data analysis and mapping services to organizations seeking to better understand, analyze and visualize their data. We collate large datasets, map various socio-economic variables and create web visualizations to help clients better understand their geographic context and make data-driven decisions.
- 5. GIS Software Development:** RomoGIS has the capabilities to develop GIS solutions tailored to the specific needs of our client. We develop custom GIS apps that help organizations collect and analyze data. We also develop data infrastructure and databases for organizations seeking to integrate GIS solutions with their existing organizational systems to streamline data collection, analysis, and visualization processes.
